Poinsecja - panel (6 testów)

Opis produktu

Poinsecja (Gwiazda betlejemska) - panel (6 testów)

Key warning symptoms:

1. Mottle
2. Shoestringing
3. Deformation
4. Distorted bracts

Poinsettia mosaic virus is widespread, with some poinsettia varieties nearly 100% infected. But the virus apparently does the plants no harm under good growing conditions. Under poor conditions, such as too-cool temperatures or insufficient light, the virus can cause mottled patterns on leaves or distortion of the bracts.

Poinsettia mosaic virus is not responsible for many of the apparent virus symptoms seen in poinsettias. Even when a plant tests positive for the virus, the symptoms may be due to a nutritional problem or other cause.

Poinsettia Screen (6 tests)

Pathogen	Symbol
Cucumber mosaic virus	CMV
Impatiens necrotic spot virus	INSV
Poinsettia mosaic virus	PnMV
Potyvirus group test	POTY
Tomato spotted wilt virus	TSWV
<i>Xanthomonas campestris</i>	Xc
