Opis produktu

Influenza A virus RT-PCR Detection Kit

Wild birds are the primary natural reservoir for all subtypes of influenza A viruses (Orthomyxoviridae family) and are thought to be the source of influenza A viruses in all other animals. Most influenza viruses cause asymptomatic or mild infection in birds; however, the range of symptoms in birds varies greatly depending on the strain of virus. Infection with certain avian influenza A viruses (strains of H5 and H7 viruses) can cause widespread disease and death among some species of wild and especially domestic birds. Influenza A viruses are also found in many different animals, including ducks, chickens, pigs, whales, horses and humans.

VetPCR? INFLUENZA A Detection Kit is the direct detection of Influenza A virus on the basis of a genetic database, so it can diagnose very fast and accurately. It can amplify only specific gene using the PCR (Polymerase Chain Reaction) method, and take only 3 hours for detection. Therefore, it is a very fast, accurate, reliable technique.

Characteristics

Ready to use : only DNA template and D.W. are needed. Easy and speed protocol. Stable for 1 year at -20?C. Time-saving and cost-effective.
