VetPCR? C. psittaci/C. abortus (48D)

Numer katalogowy

VET-A004-48D

Opis produktu

Chlamydomphila psittaci / abortus PCR Detection Kit

Chlamydomphila psittaci/abortus has a worldwide distribution. Birds are natural hosts but transmission of C. psittaci to humans occurs by inhalation of contaminated dust or through contact with the excretions of infected animals. Infections occur worldwide and have been identified in at least 150 avian species. Clinical signs vary greatly in severity and depend on the species and age of the bird.

VetPCR? C. psittaci/C. abortus Detection Kit is the direct detection of Chlamydomphila psittaci/abortus on the basis of a genetic database, so it can diagnose very fast and accurately. It can amplify only specific gene using the PCR (Polymerase Chain Reaction) method, and take only 3 hours for detection. Therefore, it is a very fast, accurate and reliable technique.

Characteristics

Ready to use : only DNA template and D.W. are needed. Easy and speed protocol. Stable for 1 year at -20°C. Time-saving and cost-effective.

Contents

Interpretation of the Test Result

Expected PCR product size : 309bp

Fig. 1 Result:

Lane M: Bragg Molecular Weight Marker
Lane 1~2: C. psittaci/C. abortus Positive samples
Lane I.C.: Internal control
Lane P: Positive control
Lane N: Negative control
