### Opis produktu

Falcon adenovirus PCR Detection Kit Falcon adenovirus is a newly recognized member of the family Aviadenoviridae and includes 2 closely related strains that are pathogenic to several species of falcons. The primary lesions are inclusion body hepatitis, splenomegaly, and moderate to severe lymphoid atrophy and lympholysis in the bursa of Fabricius. Virus is spread horizontally.

VetPCR? FAdV Detection Kit is the direct detection of Falcon adenovirus on de basis of a genetic data base, so it can diagnose very fast and accurately. It can amplify only specific gene using the PCR (Polymerase Chain Reaction) method, and take only 3 hours for detection. Therefore, it is a very fast, accurate, reliable technique.

#### **Characteristics**

Ready to use: only DNA template and D.W. are needed. Easy and speed protocol. Stable for 1 year at -20?C. Time-saving and cost-effective.
