VetPCR? B.bovis (96D)

Numer katalogowy

VET-B003-96D

Opis produktu

Babesia bovis PCR Detection Kit Bovine babesiosis is a major tick-borne disease of cattle caused by protozoan parasites (Babesia spp). Out of at least six Babesia species that have a considerable impact on livestock health and productivity, two species, Babesia bovis and Babesia bigemina have the greatest affect. B. bovis is more virulent than B. bigermina and the babesiosis caused by B. bovis is less sensitive to some babesiacidal compounds making it difficult to cure the infected animals. Animals that survive from B. bovis infection generally become carriers of the parasite and serve as reservoirs for transmission.

VetPCR?B.bovis Detection Kit is the direct detection of Babesia bovis on the basis of a genetic database, so it can diagnose very fast and accurately. It can amplify only specific gene using the PCR (Polymerase Chain Reaction) method, and take only 3 hours for detection. Therefore, it is a very fast, accurate and reliable technique.

Characteristics

Ready to use: only DNA template and D.W. are needed. Easy and speed protocol. Stable for 1 year at -20?C. Time-saving and cost-effective.

Contents

Outicitis			
Kit	Quantity 48	Quantity 96	Package
VetPCR™ B.bovis Premixture	1	1	Vial
PCR Internal Control	1	1	Vial
DNase/RNase free water	1	1	Vial
B.bovis PCR Positive control	1	1	Vial
PCR Negative control	1	1	Vial
Mineral Oil Solution	1	1	Vial
Brig™ Molecular Weight marker	1	1	Vial
DNA purification kit	50	100	Test

Interpretation of the Test Result

Expected PCR product size: 238bp
