Opis produktu

HumPCR? S. pneumoniae (48D)

Streptococcus pneumoniae colonizes the upper respiratory tract of healthy individuals and is one of the most frequent causes of bacterial infection in children. Common infections caused by this pathogen include otitis media, eye infections (corneal ulcer, dacryocystitis and conjunctivitis), sinusitis, pneumonia, and meningitis. Pneumococci may also cause osteomyelitis, septic arthritis, pericarditis, and peritonitis. *S. pneumoniae* is also associated with sepsis in older children and in adults. HumPCR? *S. pneumoniae* Detection Kit is the direct detection of *Streptococcus pneumoniae* on the basis of a genetic database, so it can diagnose very fast and accurately. It can amplify only specific gene using the PCR (Polymerase Chain Reaction) method, and take only 3 hours for detection. Therefore, it is a very fast, accurate and reliable technique.
