VetPCR? MDV (96D)

Numer katalogowy

VET-A010-96D

Opis produktu

Gallid herpesvirus 2 (Marek's disease virus) PCR Detection Kit

Marek's disease is one of the most ubiquitous avian infections; it is identified in chicken flocks worldwide. Every flock, except for those maintained under strict pathogen-free conditions, may be presumed to be infected. Although clinical disease is not always apparent in infected flocks, a subclinical decrease in growth rate and egg production may be economically important.

VetPCR? MDV Detection Kit is the direct detection of Marek's disease virus on the basis of a genetic database, so it can diagnose very fast and accurately. It can amplify only specific gene using the PCR (Polymerase Chain Reaction) method, and take only 3~5 hours for detection. Therefore, it is a very fast, accurate, reliable technique.

Characteristics

Ready to use : only DNA template and D.W. are needed. Easy and speed protocol. Stable for 1 year at -20°C. Time-saving and cost-effective.

Contents

Interpretation of the Test Result

Expected PCR product size : 296bp

Fig. 1 Result:

Lane M: Brig? Molecular Weight Marker
Lane 1~2: MDV Positive samples
Lane I.C.: Internal control
Lane P: Positive control
Lane N: Negative control
